

Anish kumar M

Agentic AI Engineer | Generative AI Developer | RAG Systems | LLM Application Development

Chennai, India | +91 7695938195 | anishkumar.malaisamy@gmail.com

Professional Summary

Motivated and detail-oriented Agentic AI Engineer with hands-on experience building Generative AI applications, Retrieval-Augmented Generation (RAG) systems, AI Assistants, and Multi-Agent workflows through academic projects, internships, and self-driven development initiatives. Strong foundation in Python, LangChain, LangGraph, CrewAI, FastAPI, ChromaDB, FAISS, and Ollama. Experienced in designing intelligent AI systems capable of reasoning, planning, tool calling, document retrieval, workflow automation, and contextual memory management. Passionate about leveraging Large Language Models (LLMs) and Agentic AI frameworks to solve real-world business problems through scalable and secure AI-powered solutions. Skilled in prompt engineering, vector databases, REST API development, and AI application evaluation.

Technical Skills

Agentic AI Frameworks: LangChain, LangGraph, CrewAI, Flowise, AutoGen, n8n

Generative AI & Large Language Models (LLMs): Llama 3.1, Mistral 7B, Gemma 2, Phi-3, GPT-4o, Claude

Programming Languages: Python, SQL, JavaScript (Basic)

Vector Databases: ChromaDB, FAISS, Pinecone, Qdrant (Basics)

Backend Technologies & APIs: FastAPI, REST APIs, Postman, Pydantic

Retrieval-Augmented Generation (RAG) & Search: RAG Pipeline Design, Hybrid Search, Vector Search, Document Chunking, Embeddings, Sentence Transformers

Prompt Engineering: Few-Shot Prompting, Chain-of-Thought (CoT), Prompt Chaining, Structured Output Generation, Tool Calling

Memory Systems: Conversation Memory, Window Memory, Vector Memory, Memory Summarization

Evaluation & Testing: RAGAS, Prompt Evaluation, Human Evaluation, A/B Testing, Response Validation

Tools & Platforms: Git, GitHub, Docker, VS Code, Jupyter Notebook, Linux

Cloud & DevOps: AWS EC2 (Basics), AWS S3 (Basics), GitHub Actions, Docker

Database Technologies: PostgreSQL, MySQL

Workflow Automation: n8n, Workflow Automation, Scheduled Workflows, API Integrations

Document Processing: PDF Processing, Document Parsing, Data Extraction, Knowledge Base Creation

Version Control: Git, GitHub

Academic Projects & Hands-On Experience

Generative AI & Agentic AI Development *January 2026 – May 2026*

Technology Stack: Python, LangChain, LangGraph, CrewAI, FastAPI, Ollama, ChromaDB, FAISS, GitHub, Postman

- Developed Retrieval-Augmented Generation (RAG) applications for enterprise document search and knowledge retrieval use cases as part of academic learning and self-driven projects.
- Built document ingestion pipelines capable of processing PDF, DOCX, CSV, and structured documents for semantic search and contextual retrieval.
- Designed and implemented LangChain-based conversational AI workflows integrating vector databases and retrieval mechanisms.
- Created FastAPI services to expose AI applications through REST API endpoints.
- Implemented ChromaDB and FAISS vector stores for storing embeddings and enabling semantic document search.
- Worked on prompt engineering techniques including Few-Shot Prompting, Chain-of-Thought Prompting, and Structured Output Generation to improve response quality.
- Built AI-powered assistants capable of answering domain-specific questions using custom knowledge bases.
- Developed proof-of-concept Agentic AI solutions utilizing LangGraph state machines and CrewAI multi-agent architectures.
- Performed response evaluation and validation using RAGAS metrics, manual review, and prompt optimization techniques.
- Integrated external APIs and workflow automation components to enhance AI application capabilities.
- Explored memory management concepts including Conversation Memory, Window Memory, and Vector Memory for contextual AI interactions.
- Built end-to-end AI applications covering document retrieval, conversational AI, workflow automation, and intelligent assistance use cases.

Key Learning Areas

- Retrieval-Augmented Generation (RAG)
- Multi-Agent Systems
- LangGraph Workflows
- CrewAI Agent Orchestration
- Vector Databases
- Prompt Engineering
- FastAPI Development
- AI Evaluation Frameworks
- Workflow Automation
- LLM Application Development

Academic Projects

Project 1: FinGenius AI – Intelligent Banking Knowledge Assistant

Role: Agentic AI Developer · Duration: January 2026 – March 2026

Business Problem

Customers often struggle to find information related to banking services such as account opening, loan products, credit cards, fixed deposits, EMI calculations, branch details, and KYC requirements. Traditional FAQ systems provide static responses and cannot understand contextual customer queries.

Project Description

Developed an AI-powered Banking Knowledge Assistant capable of answering customer queries, retrieving banking information, recommending suitable banking products, and providing contextual support using Retrieval-Augmented Generation (RAG). Implemented a conversational AI system that understands customer intent, retrieves information from banking knowledge repositories, and generates accurate responses through Large Language Models.

Tech Stack: Python, LangChain, LangGraph, FastAPI, Ollama, ChromaDB, FAISS, RAGAS, GitHub

Project 2: CommercelQ AI – E-Commerce Operations Intelligence Assistant

Role: Agentic AI Developer · Duration: March 2026 – May 2026

Business Problem

E-commerce support teams often spend significant time answering repetitive questions related to products, orders, returns, refunds, shipping status, and promotional offers. Manual handling of these requests increases operational effort and response time.

Project Description

Developed an AI-powered E-Commerce Operations Assistant capable of handling customer inquiries, retrieving product information, tracking orders, answering return policy questions, and providing personalized recommendations. Implemented an Agentic AI workflow capable of retrieving information from product catalogs, order data, and operational documentation through semantic search and intelligent reasoning.

Tech Stack: Python, LangChain, LangGraph, FastAPI, Ollama, ChromaDB, FAISS, RAGAS, GitHub

Certifications

- Generative AI Fundamentals
- LangChain for LLM Application Development
- Agentic AI Fundamentals
- Prompt Engineering for Generative AI
- Python Programming Certification
- AWS Cloud Practitioner Essentials

Technical Highlights

- Built 3 end-to-end Agentic AI applications across Banking, E-Commerce, and Healthcare domains.
- Developed Retrieval-Augmented Generation (RAG) pipelines using LangChain, ChromaDB, and FAISS.
- Designed conversational AI assistants capable of contextual question answering and knowledge retrieval.
- Worked with LangGraph workflows for intelligent reasoning and response generation.
- Developed REST APIs using FastAPI for exposing AI services.
- Implemented vector databases and semantic search capabilities for enterprise document retrieval.
- Gained hands-on experience with Large Language Models including Llama 3.1, Mistral 7B, GPT-4o, and Claude.
- Applied prompt engineering techniques including Few-Shot Prompting, Chain-of-Thought, and Structured Output Generation.
- Built memory-enabled AI applications using ChromaDB and conversation memory concepts.
- Performed evaluation and testing using RAGAS, response validation, and prompt optimization techniques.

Achievements

- Successfully completed multiple Agentic AI projects during graduation.
- Developed strong practical knowledge of LangChain, LangGraph, CrewAI, FastAPI, ChromaDB, and FAISS.
- Built AI-powered assistants capable of handling domain-specific user interactions.
- Implemented enterprise-style RAG architectures for intelligent information retrieval.
- Gained practical exposure to Multi-Agent Systems, Workflow Automation, and LLM Application Development.
- Developed reusable AI components for conversational systems and knowledge assistants.
- Continuously explored emerging Agentic AI technologies and best practices through self-learning and project implementation.

Strengths

- Strong Problem-Solving Skills
- Analytical Thinking
- Fast Learner
- Self-Motivated
- Attention to Detail
- Effective Communication
- Team Collaboration
- Adaptability to New Technologies
- Passion for Artificial Intelligence and Automation

Career Objective

Aspiring Agentic AI Engineer seeking opportunities to contribute to the design and development of intelligent AI systems leveraging Large Language Models, Multi-Agent Architectures, Retrieval-Augmented Generation, and Workflow Automation. Eager to apply academic knowledge, project experience, and technical skills to build scalable AI solutions that solve real-world business challenges and create meaningful impact.

Education

B.Tech. Artificial Intelligence and Data Science *Graduated: April 2026*

Nehru Institute of Engineering and Technology · Coimbatore, Tamil Nadu

CGPA: 8.2 / 10.0

Additional Information

Languages: English (Professional), Tamil (Native), Hindi (Conversational)

Availability: Open to hybrid and remote roles · Immediate · Willing to relocate
